

# Daydream View

Made by Google.

## Slate

A hydrophobic coating is applied to the external Shroud to protect it from dirt. The outside skin is made from a knitted polyester melange fabric and a thermal temperature shapable layer maintains the shape.

## Snow

The facepad is compression molded with a hot tool and consists of multiple layers of Sports and Classic Jersey (knitted fabrics) which are then laminated to multiple sheets of foam.

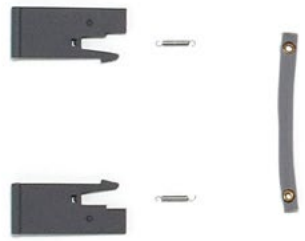

## Crimson

The hole pattern and open cell foam stack up allows the facepad to be breathable for longer periods of time in VR.

The plastic front cover is glued to the external Shroud fabric.

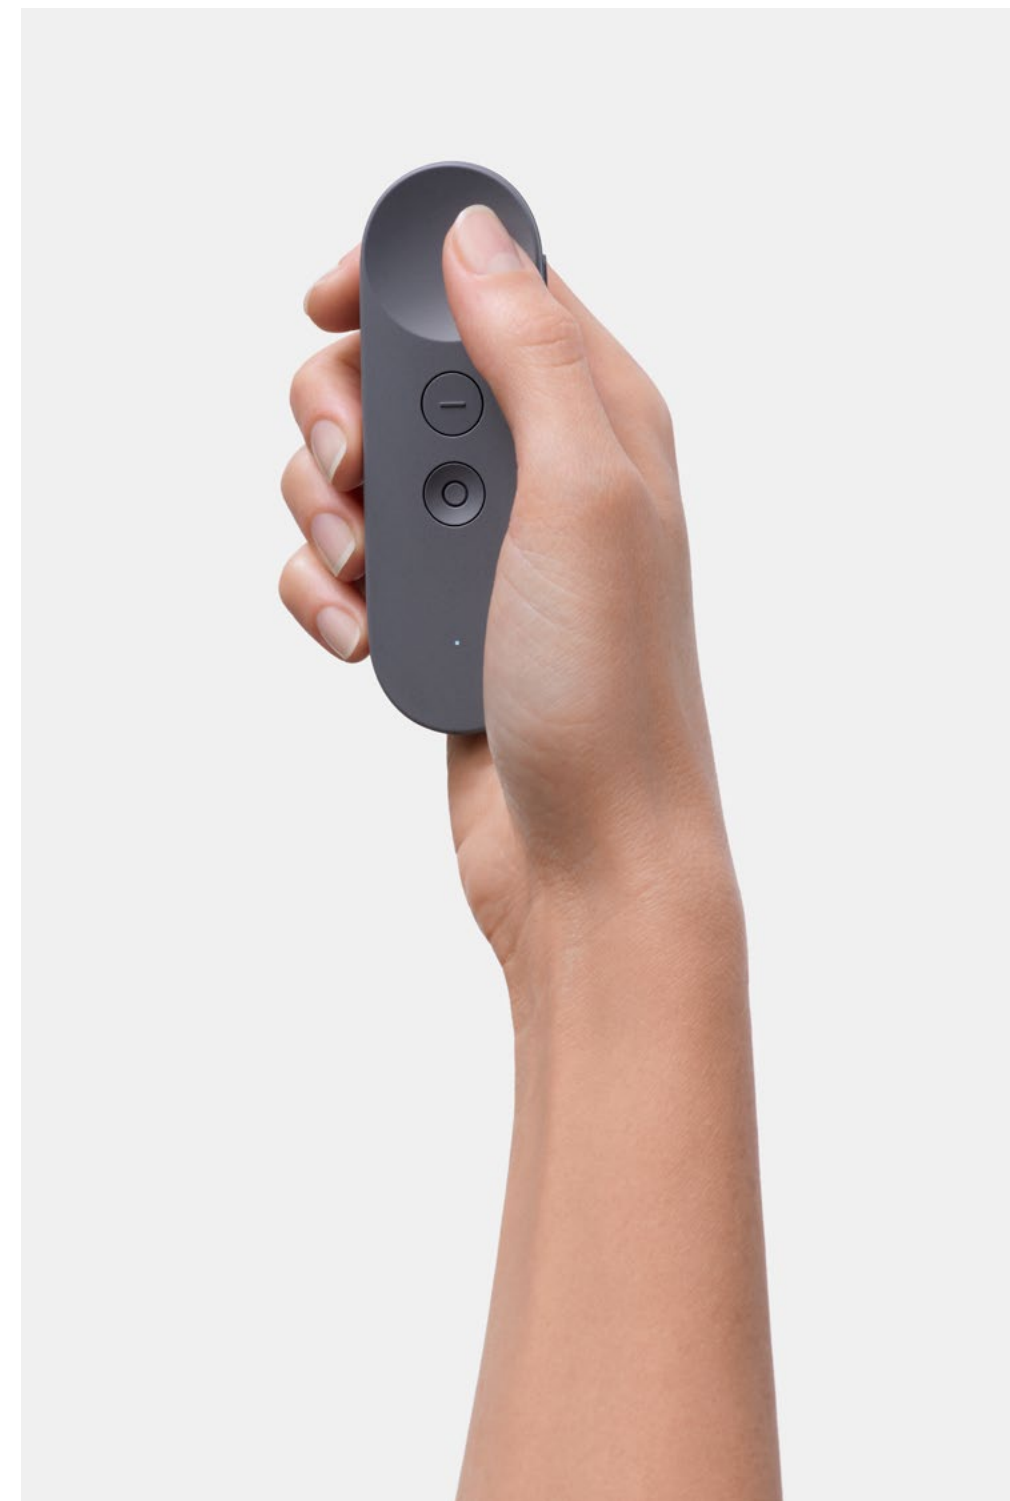

## Controller

The versatile motion controller has only four buttons: An App and a home button, a large trackpad and volume controls on the side. Its simple form language makes the controller intuitive and accessible to everyone not just VR gamers and enthusiasts.
