Improving Antenatal Care in LMICs

Fall 2021 | Concept Proposal

Meet the Team:

Maria Oleaga

Meredith Tan

Matthew Johnson

Lily Mellor

Adam Zacharewicz

Katherine Vaquerizo

Derek Thornton

Celine Diz

Dana Beraja

We Were Asked To...

- Create an integrated digital backbone with AI-enabled decision-making support to guide pregnancy care in secondary regional care centers
- Design specific tools for risk assessment, monitoring, and decision-making in antenatal and intrapartum care

Karnataka, India

Why Karnataka?

- Access to internet
- Existing antenatal care
- High maternal mortality rate
- Initiative to improve infrastructure

Target User:

Graduate Nurses & Midwives

AI

Tests: Non-invasive

01

Gestational
Age

02

Glucose

03

Infection

04

Blood-
Oxygen

05

Blood
Pressure

Gestational Age:

Technology:

Determine gestational age through a human chorionic gonadotropin (HCG) urine test within the First Trimester

How it Works:

- 01 Patient urinates into collection cup
- 02 Strip soaks in urine and changes colors according to a gradient scale
- 03 Tablet takes photo of strip on top of the color constant background
- 04 AI analyzes image determines gestational age
- 05 App reports results

Glucose:

Technology:

Measure glucose levels through urine test

How it Works:

- 01 Patient urinates into collection cup
- 02 Strip soaks in urine and changes colors according to a gradient scale
- 03 Tablet takes photo of strip on top of the color constant background
- 04 AI analyzes image determines glucose levels
- 05 App reports results

Infection:

Technology:

Measure possible infection through urine testing

How it Works:

01 Patient urinates into collection cup

02 Strip reacts and changes colors according to a gradient scale

03 Tablet takes photo of strips on top of the color constant background

04 AI analyzes image

05 App reports results

Blood-Oxygen:

Technology:

Measure blood oxygen levels through wearable device

How it Works:

01 Graduate nurse activates reading with button

02 Device releases red and infrared LED light

03 Photoelectric sensor reads amount
of light absorbed

04 AI calculates blood oxygen percentage

05 App displays readings

Blood Pressure:

Technology:

Take BP readings with monitor on wrist

How it Works:

01 Graduate nurse activates reading with button

02 Patient elevates arm

03 Arm band inflates

04 Blood pressure is read

05 AI reads and analyzes data

06 App displays readings
