

This is us.

Core77 Award// 2022

CORE77 CITYTRANSFORMER

For more than 4.2 billion people who live in urban areas, riding and parking are daily **lose-lose** games: significant time and money lost, traffic jams and parking inconveniences, and profound effects on health and safety.

Our mission is **to bring freedom back to mobility.**

CORE77
CITYTRANSFORMER

Idea

City Transformer is an electric vehicle that **changes** its width and riding behavior while it drives to outwit traffic & parking. It enables the minimal environmental and physical footprint possible for an effective and practical urban vehicle.

CORE77
CITYTRANSFORMER

Function

The CT can expand **from 1m to 1.4m** in width while driving. It allows a **minimal footprint** while substantially enhancing the vehicle's dynamic quality.

Our users can drive comfortably and safely like a car and park and outsmart traffic like a motorcycle

City Mode
1-meter width

Performance Mode
1.4-meter width

CORE77

CITYTRANSFORMER

Form

It's narrow short, and high!

The goal was to create a dynamic, almost classical vehicle out of its awkward proportions.

We chose a classical design approach to make the product more understandable to wide potential users of micro-mobility.

CORE77
CITYTRANSFORMER

Responsibility

Due to its smallest footprint, CT offers outstanding sustainability compared to any other regular or electric vehicle.

75% smaller in weight and footprint

80% less battery weight compared to an average full-sized EV.

CORE77
CITYTRANSFORMER

Partnership

City transformer is an
Israeli innovation + **German** engineering
